

# **BLOCK LOCATION MAP** स्टील ग्रेड लाइम स्टोन BANSWARA DISTRICT India - States लाल प्रकार - नमक (फलीदी )

#### FEATURES OF BLOCK: INFRASTRUCTURE & CONNECTIVITY

The Parthipura block area is 23 KM from Banswara district in Rajasthan.

The Parthipura block is well connected by roads.

The nearest Railhead is Ratlam Junction about 76 KM from Parthipura block.

The nearest Airport is Dabok (Udaipur) about 170 KM from block.

# FEATURES OF BLOCK: INFRASTRUCTURE

Most of the infrastructure i.e. Police station, Bank facility, Hospital, workshop facility, Busstand etc. are available nearby.

### LAND CLASSIFICATION OF BLOCK

Land Status:- Most of the block area falls under forest land and rest is private land.

#### GEOLOGY

 Geologically, the area comprises Phyllite, Schist, Quartzite, Limestone and Dolomite belonging to Kalinjara formation of Lunawada group of Aravalli Supergroup intruded by Amphibolite and minor Quartz vein.

pura Block-04

- Limestone exposures are undulating terrain and extending more than 3.5 KM strike length and width varies from 100m to 1000m
- It is pink, grey to cream-color, medium-grained, closely fractured trending NW-SE to NNW-SSE dipping steep North-Easterly to vertical, occasionally reverse due to local folding.
- NNW-SSE to NW-SE dipping 60°-85° due NE at places reverse due to local folding.

- In the southern continuity it is bifurcating into Eastern and Western parts, divided by Quartzite and Dolomite.
- The Limestone exposed is crystalline in nature light pink/grey white fine to medium-grained, hard & compact, fractured, jointed, at some places friable in nature.

#### **EXPLORATION**

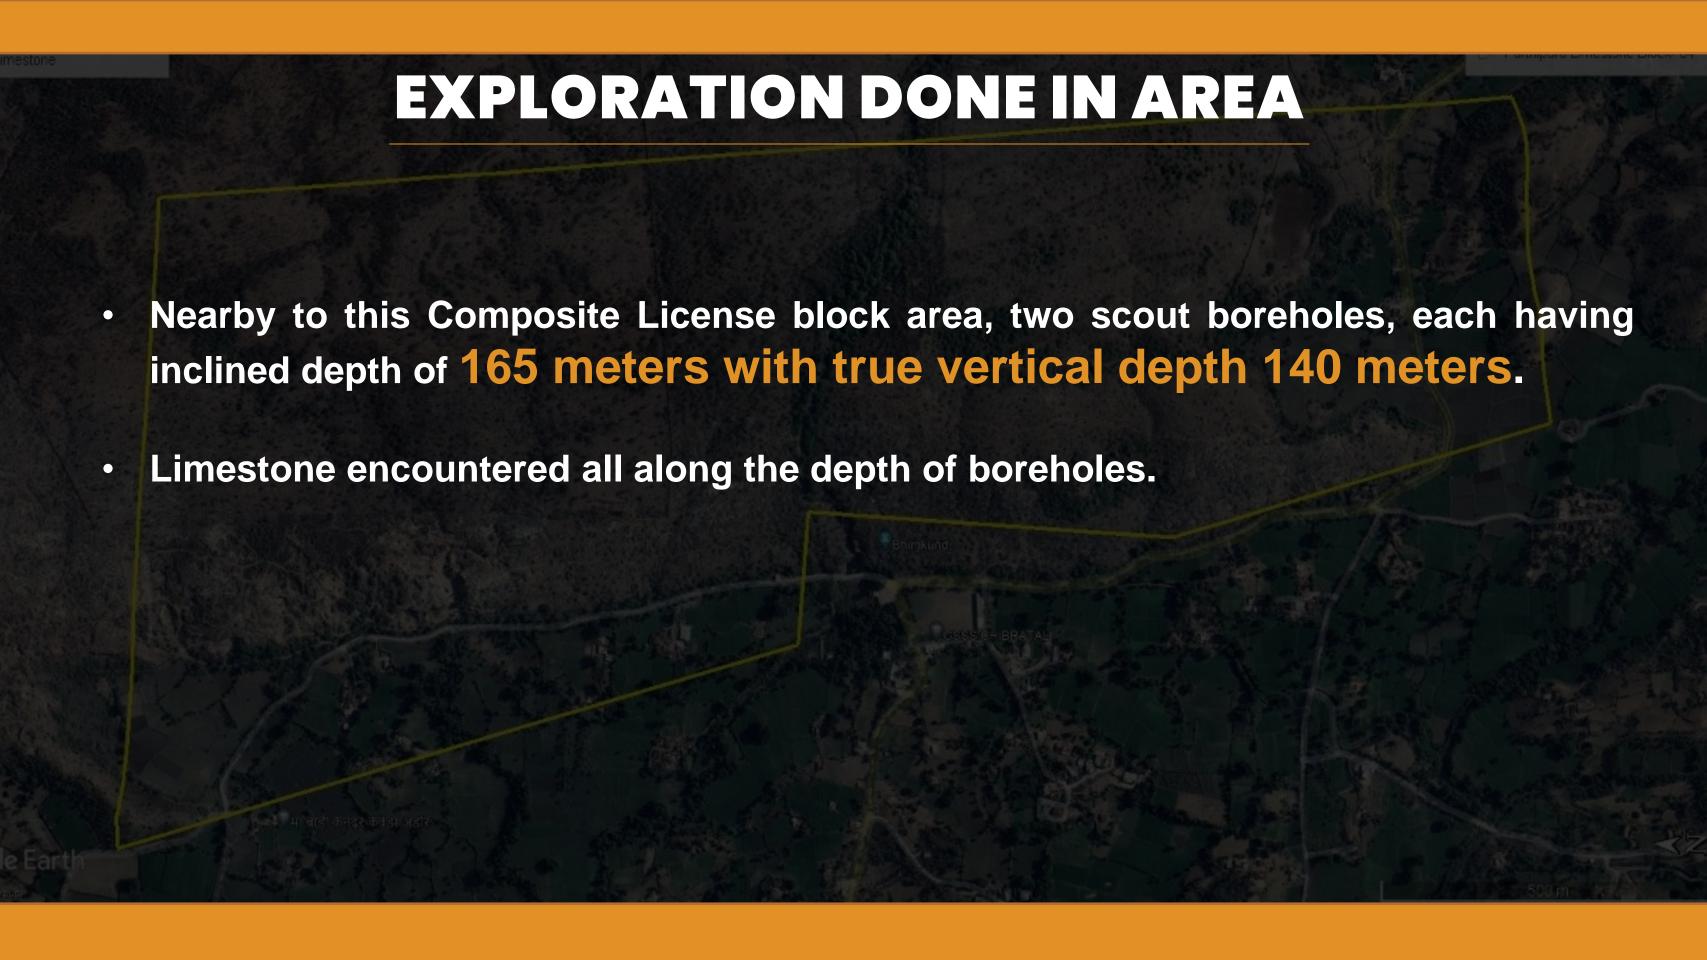

This block area was explored at G-4 level by Mines & Geology Department, Rajasthan.

#### During the period 1985-87, exploration work as under-

- Reconnaissance survey- 75 Sq. Km.
- Regional geological mapping- 47 Sq. Km.
- Detailed geological mapping- 1.95 Sq. Km.
- 14 no. of boreholes, total drilling 402.95m
- Chip sampling- 270 nos.
- Channel sampling- 64 nos.
- Cement grade limestone deposit having moderate to good quality of limestone.

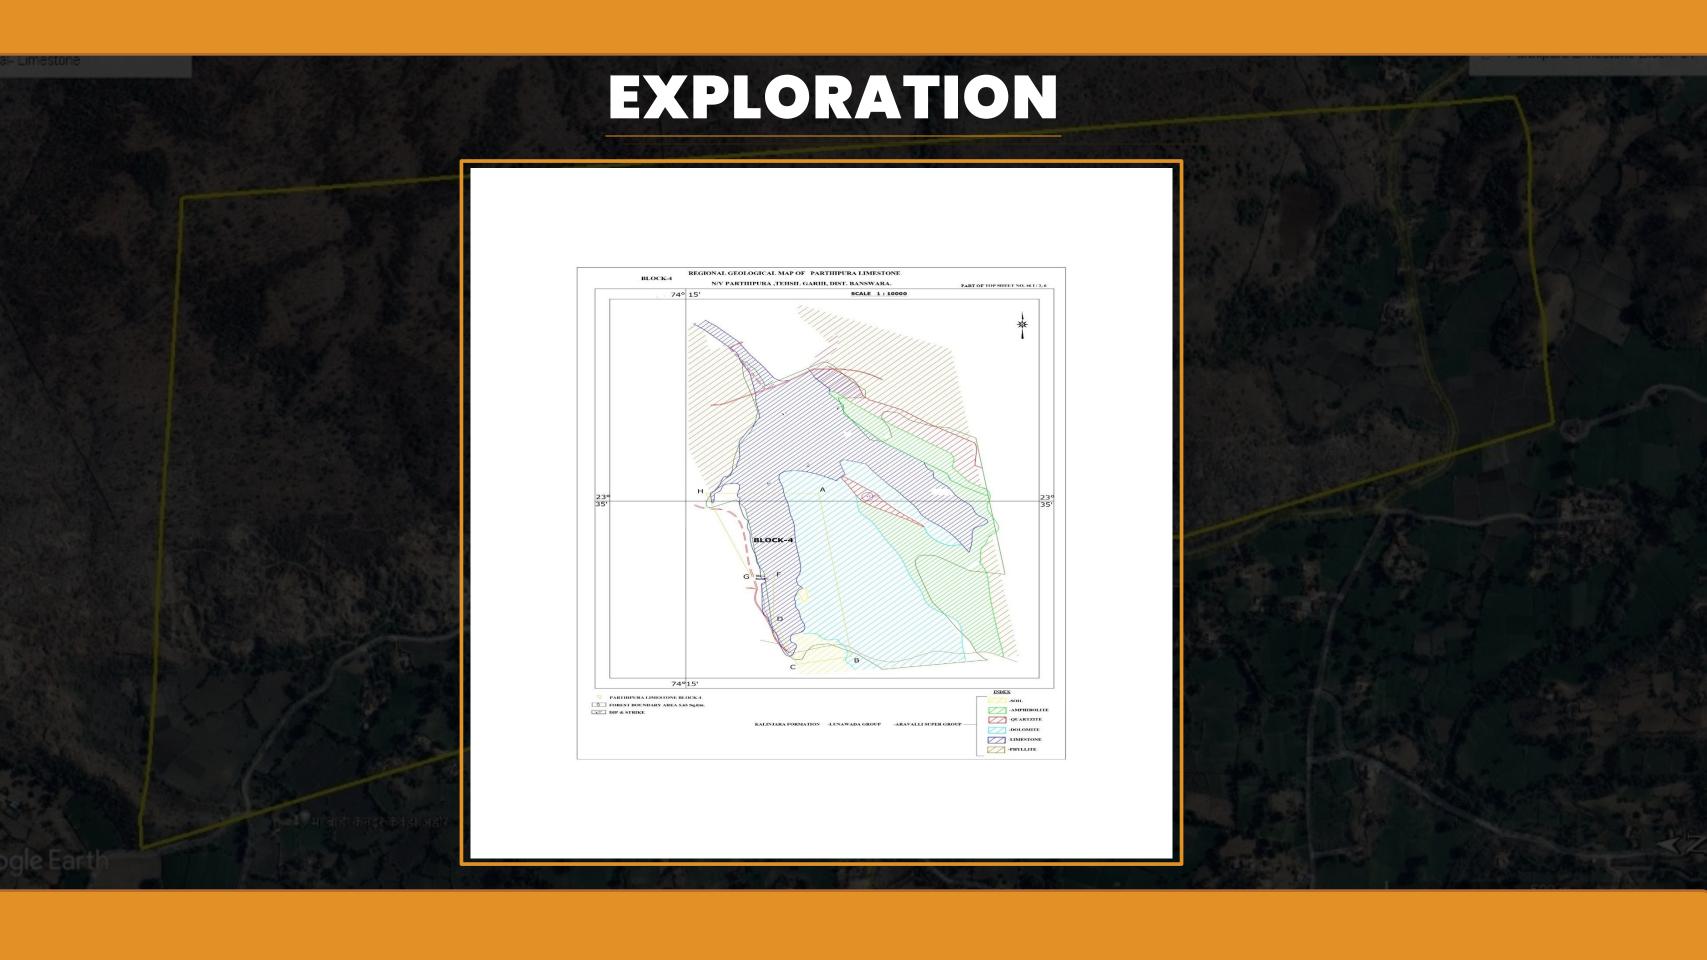

#### **Exploration done in the area** thereafter as under-

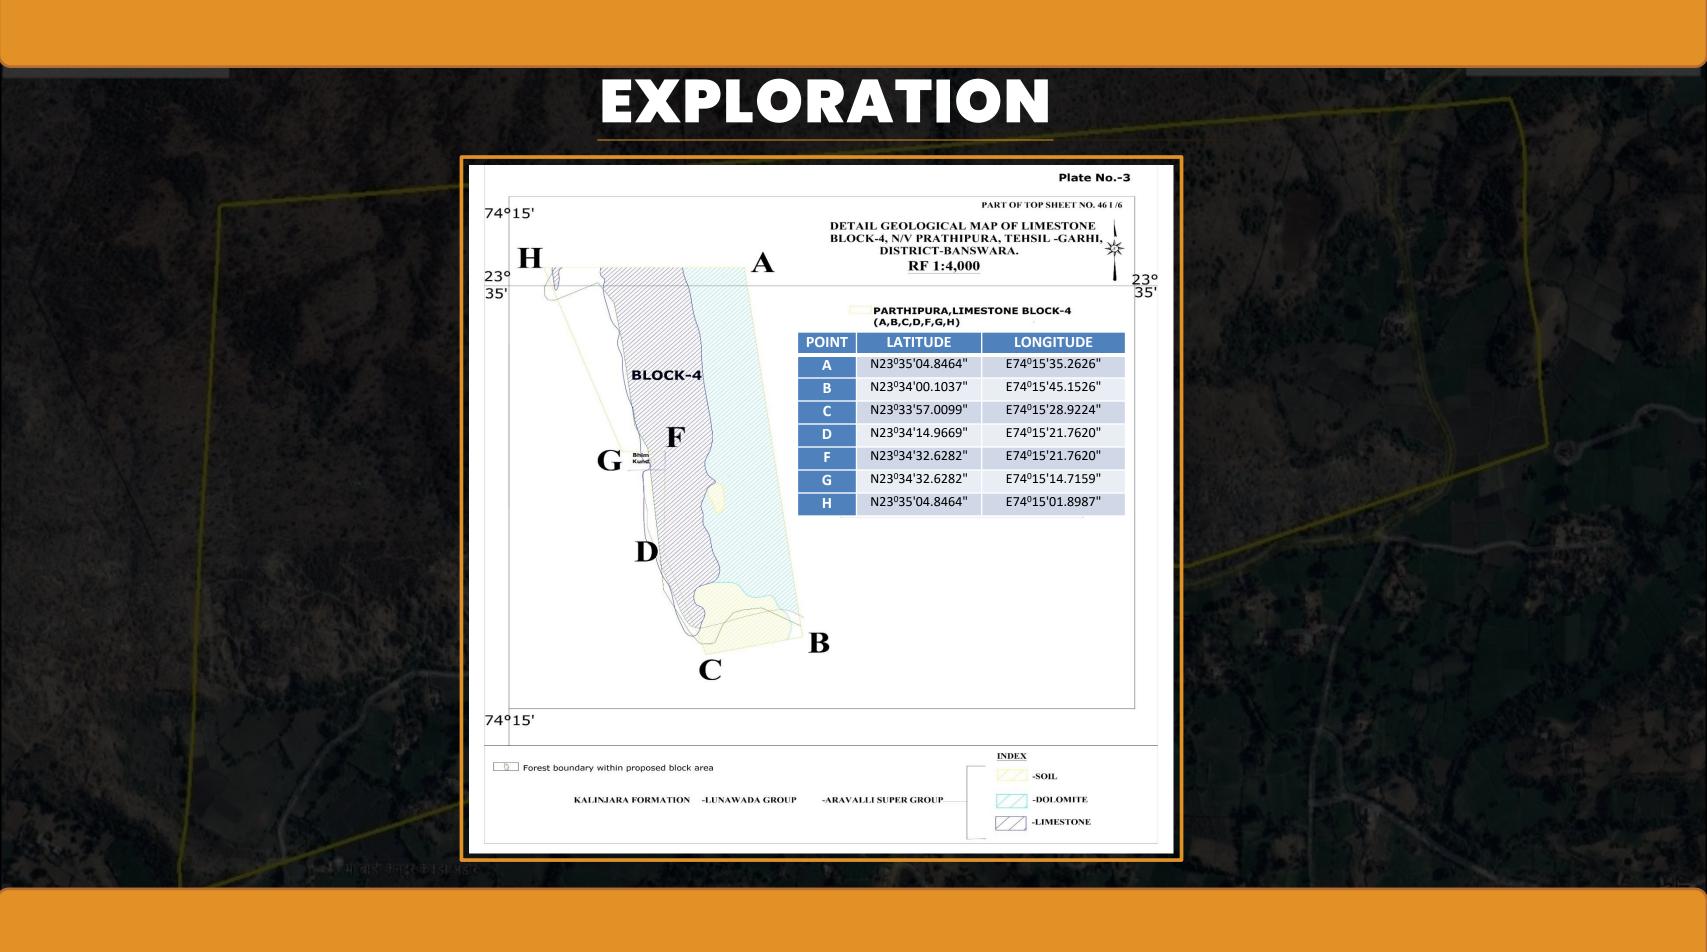

- Area of geological survey- Kushalpura, Bhimkund
- Exploration area is covered under-N23<sup>0</sup>30'00"- N23<sup>0</sup>37'00" E74<sup>0</sup>13'00"- E75<sup>0</sup>20'00"
- Regional and detailed geological mapping were done during exploration.
- Findings of project- Two limestone bands have been found in area. One is 50 to 400 meter wide and another is 50 to 100 meter wide, goes upto 200 meter wide near Parthipura village.
- Limestone found is Coarse grained and colour varies from Dark grey to Medium grey and White to Pink.
- Limestone bands in area are lying NW-SE with steep dipping towards SW or NE.
- Limestone varies in area having CaO 44 to 54% with low Silica.

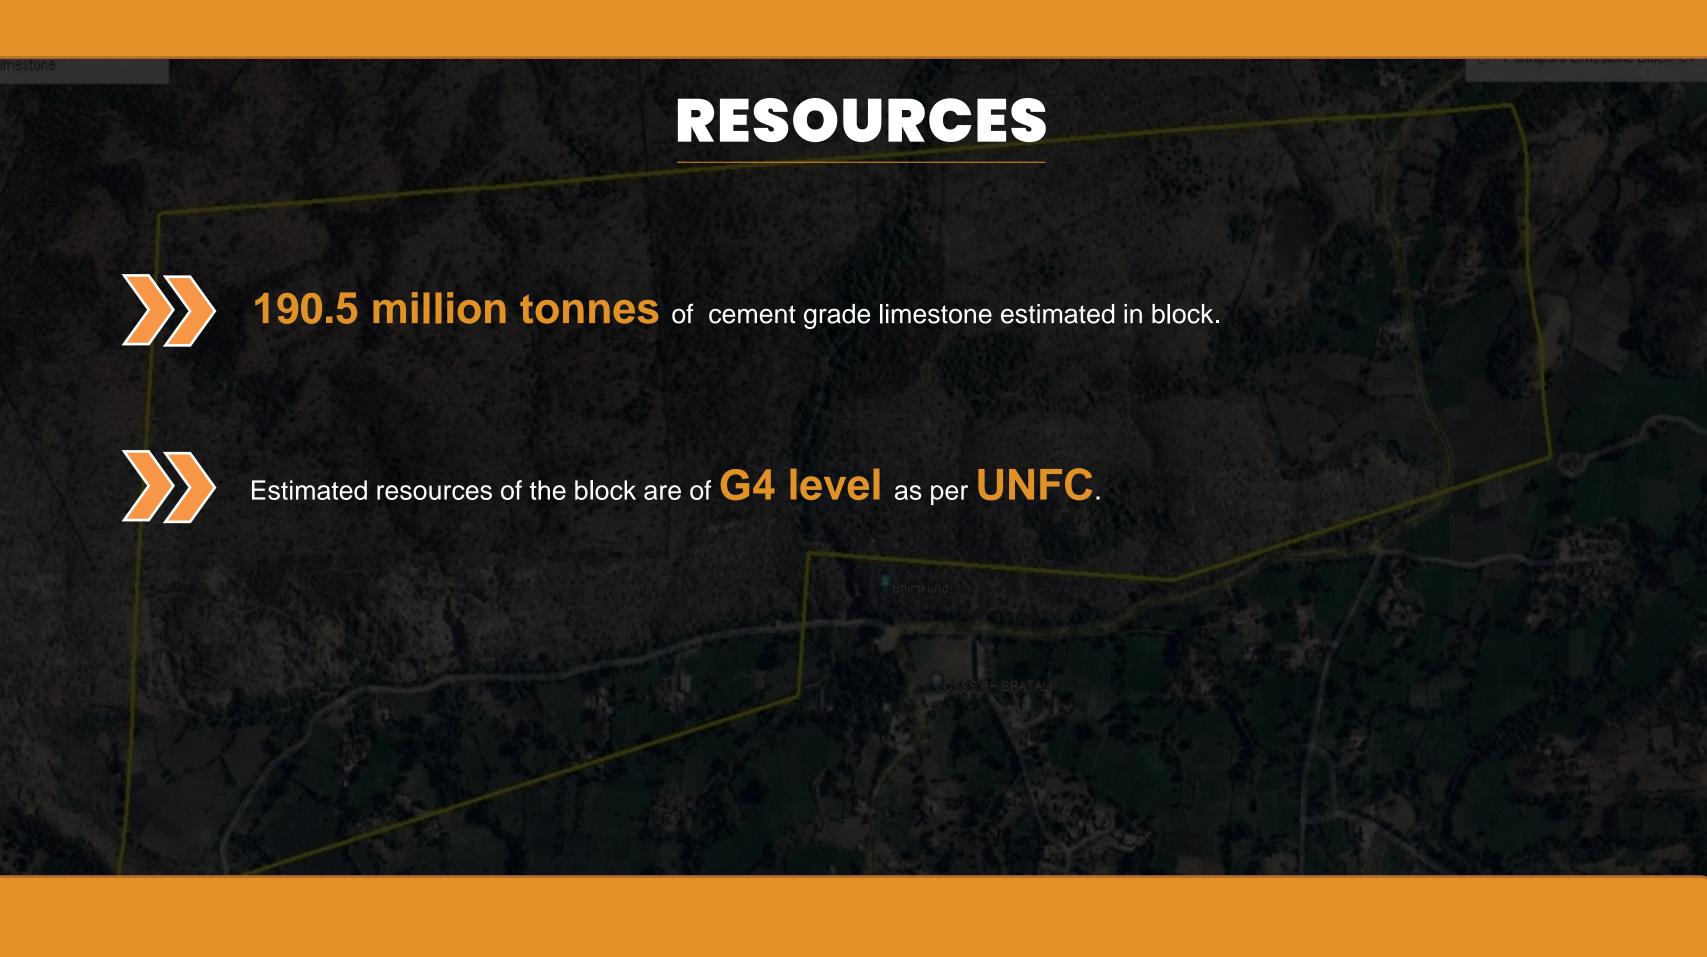

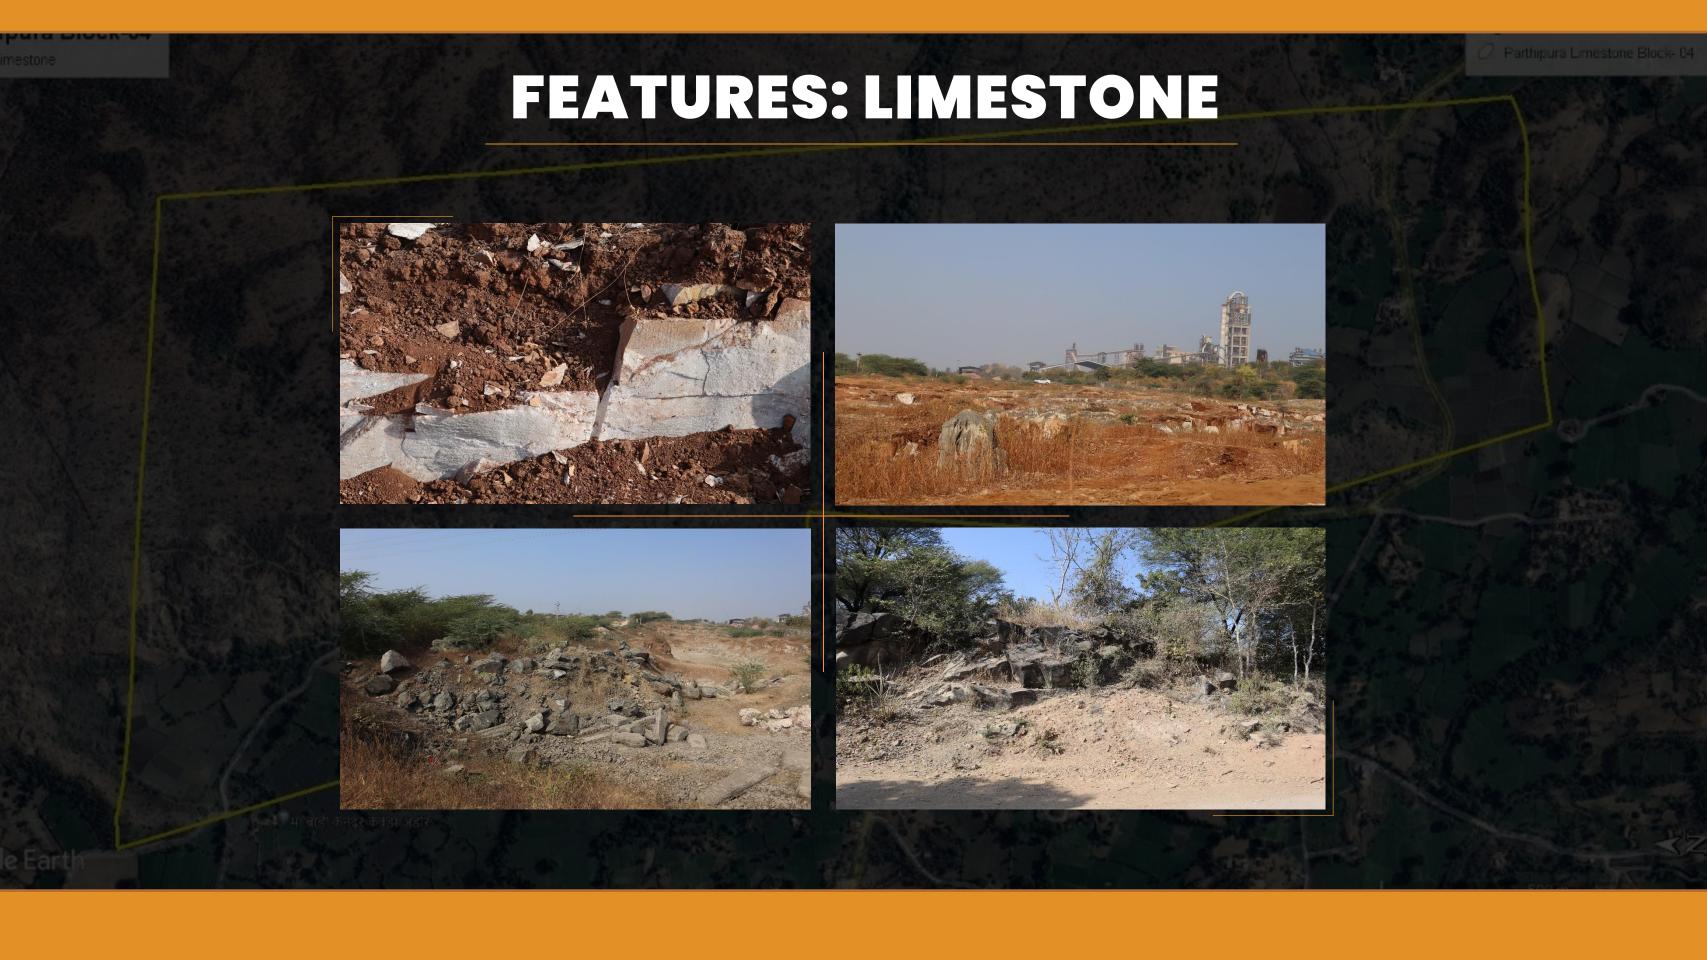

## **EXPLORATION**

#### NEARBY LEASE- PARTHIPURA LIMESTONE MINE

- Mining Lease No.- 01/1993 M/s India Cements Limited
- Mineral- Limestone (Cement Grade)
- Lease area- 65.82 Hectare
- Reserves as per mining plan- 86.990 million tonnes (Balance as on 01.10.2020) having CaO-41.33 to 53.08 %, MgO- 0.33 to 1.55 %, SiO2-5.69 to 17.58%.
- End use of mineral- Captive cement plant in vicinity of mining lease.
- Plant capacity- 1.80 million ton per annum of Cement

# NEARBY LEASE- M/S TRINETRA CEMENT LTD.
